

## AH THE PLEASURES OF MOWING...

It's a vicious cycle. The rains come down, the sun comes out, the grass grows and then we mow. The rain comes down, the sun comes out and ...well you know the rest. From spring through fall, we mow, and mow and mow.

Unfortunately there is one reality that will not go away. When we mow, if we discharge the grass cuttings into roadways this grass will find its way to the nearest storm drain and cause backups!

Then when the rain comes down again, the storm drains will become clogged. Water will back up into the street and create a hazardous situation.

Why not plan ahead and make sure the grass discharge on the mower faces away from the street as you mow. Then you will not be violating the Sayre Borough Code that regarding discharge of grass cuttings into the road.

Please be a responsible resident of Sayre. Dispose of yard waste legally to avoid storm drain backups, flooded roads and safety problems. Thank you.
